The modules updated in this release are:

ActiveDirectoryCSDsc	**StorageDsc**
AuditPolicyDsc	**xActiveDirectory**
CertificateDsc	**xBitlocker**
ComputerManagementDsc	**xExchange**
NetworkingDsc	**xFailOverCluster**
SecurityPolicyDsc	**xHyper-V**
SqlServerDsc	**xWebAdministration**

Windows Security change affecting PowerShell

- http://bit.ly/powershell-blog-security-2019-01-10

The recent (1/8/2019) Windows security patch CVE-2019-0543, has introduced a breaking change for a PowerShell remoting scenario. It is a narrowly scoped scenario that should have low impact for most users.

The breaking change only affects local loopback remoting, which is a PowerShell remote connection made back to the same machine, while using non-Administrator credentials.

… **you would not be affected by this change, unless you explicitly set up loopback endpoints on your machine to allow non-Administrator account access**.

PowerShell Core Release v6.1.2

- https://github.com/PowerShell/PowerShell/releases

TONIGHTS agenda!
